

Peace pieces - gel-based technology for your absolute listening pleasure.

Being a true audiophile means caring for each and every detail. It is a known fact that up to a quarter of the virtues of a high-end system derive from the set up of the components. Most people pay huge amounts of money for their machines - and forget about the fundamentals these machines have to be working on. We have set out on a mission to change this. Because each and every perfect tone is totally worth any effort.

THIXAR is proud to serve all truly knowledgeable aficionados of our art with our latest gel-based proprietary damping technology. Decoupling all components from the shelf beneath the equipment to reduce vibrations caused by low frequency waves to a minimum.

While at the same time dampening the inner vibrations of the component itself! Thereby calming and purifying the output. Proprietary THIXAR technology, gel based and hand made, can help you reach the realms of out-of-this-world machinery with the equipment you already have at home.

"There wasn't a single device that would not respond in a positive way." says an eminent European reviewer. Rating Thixar equipment as audiophile components, not as pieces of furniture.

Thixar gel technology brings peace to the music. Getting rid of all disturbances gives room to more details, a wider space, a higher tonal beauty.

Thixar gel technology brings peace to your machines. Eliminating vibrations that harm both the sound and the electronical parts.

Thixar gel technology brings peace to their owner. Because he has done all that can be done to make his set-up really shine.

Thixar gel technology brings peace to your listening room. And undisturbed pleasure to you, with each and every record.

Namasté, as they say in yoga. Let's bring peace to the music!
